

Creating a Vertical Garden

This playbook describes the steps to convert a small space into a lush vertical garden with the use of hanging planters. It guides through selecting an appropriate location, choosing plants, and maintaining the garden.

Step 1: **Site Selection**

Choose a suitable location for your vertical garden that receives adequate sunlight, has proper air circulation, and is near a water source for easy watering.

Step 2: **Plan Design**

Sketch a design for your vertical garden considering the available space, the type of planters you will use, and the overall aesthetic you want to achieve.

Step 3: **Gather Materials**

Acquire all necessary materials and tools, including hanging planters, potting soil, plants, hooks, a watering system, and gardening tools.

Step 4: **Install Mounts**

Install the necessary mounting hardware on the chosen wall or structure, ensuring it is capable of supporting the weight of the planters when filled with soil and plants.

Step 5: **Prepare Planters**

Fill the hanging planters with potting soil, leaving enough room for planting, and ensure they have proper drainage.

Step 6: **Plant Selection**

Select plants suitable for vertical growth that will thrive in the conditions of your chosen location and arrange them according to your design plan.

Step 7: **Position Planters**

Hang the planters on the mounts according to your design layout, making sure they are secure and spaced appropriately for the plants to grow.

Step 8: **Planting**

Carefully plant your chosen plants in the planters, water them thoroughly, and add any necessary supports like stakes or trellises.

Step 9: **Ongoing Care**

Regularly water your vertical garden, fertilize as needed, prune dead or overgrown foliage, and monitor for pests and diseases.

General Notes

Watering System

Consider installing a drip irrigation system for easier watering, especially if the vertical garden is large or difficult to reach.

Seasonal Changes

Be mindful of seasonal changes and how they might affect the sunlight and temperature where your vertical garden is located. Adjust care accordingly.
